

Garkusha Nikita

Front End Developer

EDUCATION

Belarusian State University

Faculty of Mechanics and Mathematics | 2022-2025

*Mathematics and Information Technologies,
Web-programming and internet technologies*

PROJECTS

Chat app

React, React Router, socket.io, axios

- Developed the front-end of a real-time chat application as part of a course project. Implemented interactive user interfaces and real-time message exchange functionality using Socket.IO for WebSocket communication.

Api-notion

React, React-router-dom, Tailwind CSS

- React application for notes. Each user can create, delete and edit his notes.

Online-store

React, CSS Modules

- online store with the possibility of filtering and sorting

Russian — native

English — B1

products.

- Filter (search, color(multiselect), category(multiselect))
 - Sorting (first cheap , first expensive, popular)
-

Filterable todo list

React

- Developed a Filterable Todo List application that allows users to add, manage, and filter tasks. Features include the ability to create tasks with a checkbox to mark them as completed or not, display the creation date, and delete tasks on hover.
-
